7th IWCFTA

Welcome to the 7th IWCFTA, Qingdao, Shandong, China, September 12-14, 2014

Chaos and fractals are among the greatest discoveries of the 20th century, which have been widely investigated with significant progress and achievements. It has become an exciting emerging interdisciplinary area in which a broad spectrum of technologies and methodologies are being studied to deal with large, complex, and dynamical problems.

The 7th IWCFTA aims to provide a high-level international forum for scientists, researchers and engineers to present the state-of-the-art advancements in the studies of chaos-fractal theories and their applications to complex systems, cryptography, information processing, multimedia, communications, biology, economics, finance and so on.

Some accepted papers will be further peer-reviewed for publication in some journals.

All the accepted papers of the conferences in the past few years were indexed by EI Compendex. The IWCFTA 2009, IWCFTA 2010, IWCFTA 2011 and IWCFTA 2012 have been reported by IEEE Circuits and Systems Society Newsletter. More information can be found at:
