

***** **Mathematical Weekly** *****
(week eighteen)

1. Pick an integer number between 2 and 9
2. Multiply it by 2
3. Add 5 to the result
4. Multiply it by 50
5. If your birthday has already passed in this year, add 1753 to it;
otherwise, add 1752
6. Subtract the four digit year that you were born
7. Stop

Now, you should have a three digit number. Let me guess
In the resultant number you got, the first digit was the one you picked
at the beginning, and the next two numbers are your age!

Don't believe me? Try again!
