

**Mr CHAN Chun Wai (2001  
BEngEE, 2001 MEngEEBM)**

“Engineers shouldn't be sitting in a lab doing experiments alone all day long, cooperative and communication skills are also crucial to the job”. Mr Chan believes that studying engineering and a career pathway in engineering should be inspiring and endless instead of restrictive. Expertise in engineering and management positions are not mutually

exclusive. That is why he pursued two Masters' Degrees - Master of Engineering and Master of Science in Business Management in CityU after finishing his undergraduate degree at CityU EE. To him, both hands on experiences and business operation in the field of engineering is very practical. He integrates these elements from his study and later applies them to his career.

He describes his experience with CityU EE fruitful and eye-opening , where he has the opportunity to widen his horizon and obtain diversified skills and knowledge at the same time. His Masters' Program allows him not just to focus on advanced level engineering knowledge, but more importantly demonstrates how the business environment looks like in real life. Being trained with Project Management, Accounting or even Advanced Communication Skills, he realized every research and development project in engineering should have a scheduled timeline, budget control and regular reporting system.

He encourages our current and future EE students to pursue multiple interests, and should not be setting limitations on themselves. University is where one undergoes self-exploration, and prepares themselves before entering the workforce. Always learn and stay creative throughout life.

Mr Chan is currently a Deputy General Manager at Tongfang Global Limited, which manufactures and distributes multimedia products worldwide.
