

Dr YUM Tsz Yin (2002 BEngEE, 2005 PhD)

Since he was in secondary school, Dr Yum was very keen in Math and Physics. He also enjoys the creativity involved in building electronics and inventing things. Therefore, he joined CityU EE to pursue his study without a doubt, which he thinks has profound impact on his career life as an engineer and later an entrepreneur.

His unforgettable experience in CityU EE, including participating in career-oriented programs like the Industrial Attachment Scheme (IAS), helped him greatly in planning ahead of himself. For instance, the scheme not only provided him with a platform to meet professors that later mentored his final year project, but also gave him insights on the electronic engineering industry. He said such a scheme, which has strong links with the industry, gives students a real insight on multiple valuable prospects, and is very helpful for the final year students to seek out their future paths.

His advice for our current EE students is that hard work really pays off. The more effort you exert, the more rewards you will get in return. He thinks that young people nowadays are very ambitious, but they should try to be humble and work diligently. He believes that as long as you are working on something you have a passion for, you will eventually find your expertise.

Moreover, he also reminds students to have an open mind, and prepare for continuous learning. One should always be prepared for the challenges to come throughout life. What you are learning now might not be directly related to your future career, but it helps greatly with your personal growth. For instance, Dr Yum himself is an entrepreneur with an engineering background, where he didn't have any experience in the business sector prior to entering the workforce, and had been learning about engineering throughout his whole university career.

Dr. Yum Tsz Yin is the executive director and senior management of Sky Light Holding Ltd since 2016. He is primarily responsible for the sales, program, marketing and the daily operation of the Group. The company is one of the providers in innovative imaging devices and total solutions by deploying advanced connected device technology and cloud platforms for business partners, like GoPro, Netgear, Canon, Philips, etc.
