

**Mr IP Ka Hang Tim (2008 BEngINFE, 2012 MScEIE)**

After finishing his BEng degree at CityU EE, Mr Ip decided to go straight into postgraduate studies because the skills he previously obtained from his undergraduate degree was still fresh in his mind. His whole university endeavour with CityU EE CityU had been life changing. He has had multiple opportunities, including internships and projects, where he got support from professors and peers, as well as planned out his own career pathway. His memorable experience during his undergraduate study is that he participated in the Industrial Attachment Scheme (IAS). It helped him find his first internship, and the internship prepared him for the job market and later secured him a full-time employment.

Mr Ip feels that with CityU EE's close connection with the EE and IT industries, students could gain ample opportunities to meet and work with experienced professionals in the industries even before graduation. With his personal experience, he truly believes that the IAS scheme has given him a headstart in determining his goals and starting his own career. After finishing his undergraduate degree, he continued his study at CityU EE by enrolling in the MSc Electronic Information Engineering (EIE) programme. The master's degree focused more on self-initiated learning and adopted a more flexible study mode, which allowed him to study while working full time.

His advice for our current EE students is to keep practicing and applying the skills you have learnt. It could be as minor as a small personal project on your webpage or a code repo on your GitHub. The best way to exhibit your passion and skills to others is to hone your existing skills.

Mr Ip is currently a senior DevSecOps Engineer at Roche Diagnostics, an international technological healthcare solutions company.
