

Mr Oswis Wong (BEng 2012), is the co-founder and CEO of *Air Button Technology Limited*, a Hong Kong product development and project based tech company.

Since he was young, he has been fascinated by DIY projects and building electronics. Although he had 3 degree offers from 3 different departments in CityU prior to his graduation from associate degree, Mr Wong chose EE without second thought due to his keen interest.

Pursuing studies in EE helps pave his way to entrepreneurship after he graduated. The practical knowledge of electronic engineering, as well as enriched experiences like internship and competitions from CityU EE prepared him to start his own tech company.

“Practical, interesting and challenging” is how he would describe his BEng degree at CityU EE. He would like to encourage our current EE students to try something new, find interests and discover countless possibilities, such as by attending different courses and joining extracurricular activities. These experiences are very useful to work and personal development later in life. The most important thing of all? Enjoy your university life and don't leave yourself regrets.
