Antenna Engineer

Qorvo Hong Kong Limited

Job Highlights

- Antenna Engineer
- RF Engineer
- IoT

Job description

- As a team, you develop reference designs, evaluation kits and demos with best in class performance at lowest cost.
- You provide integration and development support to our Asian customers on our products.
- You work closely together with customers for in-depth analysis of product and/or application implementation requirements, reproduce and resolve issues.
- As an Antenna Engineer your in-depth expertise will be required to support customers in a professional, effective and timely manner, from project start to finish. Enabling customers to get the designs first time right to shorten time to market.

Your profile

- Master/Doctoral degree in Electronic Engineering or equivalent and more than 2 years of working/research experience in Antenna Design.
- Experience in EDA software like AnsysEM (HFSS), IE3D, CST, ADS.
- With strong understanding of PCB antennas like monopole, dipole and printed inverted-F antennas.
- Knowledge on complex semiconductor products used in consumer electronics is an advantage.
- Excellent command in written and spoken English, Mandarin and Cantonese.
- Candidate with more experience will be considered as Senior position.

Company Overview

About Qorvo

Qorvo is All Around You! We manufacture innovative RF solutions at the center of connectivity to enable high-performance applications for advanced wireless devices, wired and wireless networks and defense radar and communications for 5G networks, cloud computing, the Internet of Things, and other emerging applications. We are a global company thriving on a culture of innovation, diversity, and inclusion. Our people are always at the core of Qorvo's innovation. Qorvo is a place to stretch your imagination and push boundaries to achieve success. Learn more about [Top 10 Reasons](#) to make a career at Qorvo.

About Qorvo Infrastructure and Defense Products

It is an exciting time to be a part of Qorvo's Infrastructure and Defense Products. Qorvo's IDP manufactures and markets high performance RF and mixed signal integrated circuits for the communications markets that connect, protect and power the world. Our customers trust Qorvo to meet and exceed requirements and deliver advanced RF technologies to enable their most complex technical challenges and applications. Our products address connectivity both wired and wireless networks, the smart home and the IoT, broadband, aerospace, defense, and automotive. Our customers rely on us to solve the industry's most complex engineering problems. And that takes brain power and willingness to create and innovate. Join us and help us continue to create cutting edge technologies for a more connected world all around you. Watch the IDP [video](#).
