Chaos and fractals are among the greatest discoveries of the 20th century, which have been widely investigated with significant progress and achievements. It has become an exciting emerging interdisciplinary area in which a broad spectrum of technologies and methodologies are being studied to deal with large, complex, and dynamical problems in science and engineering.

The 11th IWCFTA aims to provide a high-level international forum for scientists, researchers and engineers to present the state-of-the-art advancements in the studies of chaos-fractal theories and their applications to complex systems, cryptography, information processing, multimedia, communications, biology, economics, finance and so on.

After being reviewed by experts, some of excellent papers will be recommended to SCI-indexed journals to be published.
